1.1 Overview of all MONORAIL products

MR

High rigidity, great dynamic and static load carrying capacity, outstanding running smoothness and the total enclosure of the carriage are the main features of the MONORAIL guideway. These properties result in higher machining rates while enhancing geometrical accuracy and surface quality of the machined workpieces. Our highly rigid MONORAIL provides improved vibration behavior, smaller vibration amplitudes and thus extends tool life.

SCHNEEBERGER has systematically applied its many years of experience in the design, production and use of roller-type anti-friction guideways in the development of the MONORAIL. Consequently the MONORAIL MR is a cost-effective anti-friction guideway which meets the challenge presented by modern machine design.

BM

SCHNEEBERGER's MONORAIL BM ball guideway features excellent dynamic properties and many commercial benefits. Designed with a small number of cleverly arranged components, it provides for excellent running properties due to the small number of transitions in the ball tracks, which lead to very quiet running, low pulsation and low friction as well as high travel speeds. The use of a trapezoidal rail section results in an extremely rigid guideway coupled with a substantial reduction in servicing time as additional wipers can be changed without dismantling the carriage. Complete sealing of the carriage guarantees maximum reliability coupled with a long service life. This robust and economical guideway rounds off SCHNEEBERGER's range of products for industrial applications with high demands on speed, reliability and consistent running properties.

BM WR / BM SR

SCHNEEBERGER's MONORAIL BM WR / BM SR systems are linear bearings made from corrosion-resistant steel and based on the MONORAIL BM ball profile guideway. They have been specially developed to meet requirements that are beyond the limits of what conventional coatings on linear bearings can cope with. This is often the case, for example, in processes where corrosion has a negative impact on conveying the products.

The MONORAIL BM WR/ BM SR also features the proven characteristics of the MONORAIL BM, such as excellent running properties, high travelling speed and a long service life.

BZ

SCHNEEBERGER's MONORAIL BZ systems are high-precision linear guide systems with integral rack drive, based on the company's proven MONORAIL BM profile guideways with balls. The benefits resulting from the integration of a profile guideway and an extremely precise rack drive mainly come into their own in the handling and automation industries, in laser and water-jet cutting tools as well as in woodworking machines.

Outlay on the production of machine beds, the installation and alignment of the guideway and gearing are substantially reduced. Single piece rail systems are available up to a length of 6 metres.

The design of the MONORAIL BZ provides for superb operating characteristics, high load-bearing capacity and rigidity together with a long service life thanks to the use of the tried-and-tested MONORAIL BM profile guideway and to the high transmittable forces, smooth running and optimum positioning accuracy offered by ground, hardened and precise helical gearing of superlative quality.

AMS 3B

The MONORAIL AMS 3B is an integrated magneto-resistive measuring system for absolute distance measurement based on the MONORAIL MR roller profile guideway. This results in the provision of a compact axis with linear measurement and guidance specially for machine tool applications. No additional assembly or adjustment of the measuring system is required, which is reflected by cost savings in machine design, manufacture and servicing. The accuracy and process reliability of the machine are also improved. The sturdy housing for the read-head has a complete wiper system consisting of longitudinal and cross wipers, which provide optimum protection for the measuring system.

AMS 3B is available in both analog and digital versions. The AMSA 3B analog version has a voltage interface of 1 Vpp for connection to all standard control systems, and forms the basis for the AMSD 3B digital version. The profile rails are thus identical and are compatible with both versions.

The AMSD 3B version has an incremental, digital interface and a range of reading head options that permit different resolutions and allow the system to be adapted to control systems with different input frequencies.

AMS 4B

The MONORAIL AMS 4B is an integrated magneto-resistive measuring system for distance measurement based on the MONORAIL BM ball profile guideway. In measuring terms, the AMS 4B is the same as the AMS 3B; it offers the same performance in terms of assembly, cost savings, accuracy and process reliability.

AMS 4B products are preferred for use in applications that make major demands on travelling speed and require good resistance to acceleration and vibration.

AMSABS

The MONORAIL AMSABS is an integrated magneto-resistive measuring system for distance measurement with an absolute interface. The AMSABS 3B is based on the MONORAIL MR roller profile guideway, while the AMSABS 4B is based on the MONORAIL BM ball profile guideway.

New features have been added to the proven benefits of the AMS products. These simplify the use of distance measuring systems in industrial environments. Because of the absolute nature of the measuring system for distance measurement, there is no longer any need for a reference run after switching on. This saves time, and thus saves costs. In addition, redundancy of information processing increases operational reliability.

The AMSABS features an absolute interface for connection with SSI controllers, SSI+SinCos controllers and all FANUC controllers.

AMSA 3L

The MONORAIL AMSA 3L is an integrated magneto-resistive measuring system for distance measurement based on the MONORAIL MR roller profile guideway with an analog voltage interface. It is SCHNEEBERGER's newest product, and is designed for use with very long axes. The AMSA 3L is made possible by the very precise construction of the measuring rails, in both mechanical and measuring terms. The special design of the rail joints, combined with the AMSA 3L reading head, means that it is possible to travel across the joints and to make the measuring axes as long as you wish. Other features of the AMSA 3L include fully interchangeable individual rails, carriages and reading heads, and reading heads with integrated electronics. A special production process also ensures that AMSA 3L components are widely available around the world. The AMSA 3L has an analog voltage interface of 1 Vpp for connection to all standard control systems.

1.2 Features of the MONORAIL system

O-geometry

Large internal spacings of the load carrying surfaces are implemented with what is called an O-arrangement of the guideway. In conjunction with roller tracks that are offset by 90°, this achieves a uniform and high absorption of forces from all directions and provides high moment rigidity.

Roller with a convex 'barrel' profile

Linear guideways have a significant influence on the overall rigidity of a machine tool. With roller MONORAIL MR, the demonstrably high degree of rigidity is achieved by using rollers, with a convex profile, as rolling elements and the optimized cross-sections of the carriage and the rail.

Compared with a ball guide, a roller guide has a flat and much larger contact area, which results in a far greater load carrying capacity.

The barrel shape enables the contact surface to adjust to the particular load and provides a smooth transition from the load zone to the unloaded recirculation area.

This results in a significant reduction in wear since it avoids edge loading coupled with minimum roller friction.

Ball with 2-point contact

The MONORAIL BM is a modern, 4-row ball guide with O-geometry. Even when pre-loaded and under load, a ball that is in the load zone only contacts the track contour of the rail and the carriage at two diametrically opposed points. Compared to a guide with 4-point contact, the precision fit of the tracks to the ball provides significantly greater load carrying capacity. Friction is minimised as the balls roll more or less without any differential slip, which results in smooth, even running.

Trapezoidal rail profile

The trapezoidal rail profile meant it was possible to optimize the carriage cross sections and the connection of the base surface of the rail to the sub-structure to achieve the highest possible rigidity. This rail profile enables easy servicing since additional wipers can be replaced directly on the rail without any complicated removal of the carriage.

1.2 Features of the MONORAIL system

In one piece up to 6 metres long

SCHNEEBERGER offers guideways for all its products in single piece lengths of up to six metres. As a result, fewer butt joints between rails are required on long guideways. This not only simplifies assembly work, but also offers improved accuracy and extends the service life of the system.

Through-hardened carriages

The steel body of the carriage is a critical element if a machine is to have a long service life with a constant level of precision. In order to satisfy these high demands, even under extreme loads and without any plastic deformation of the carriage throughout its entire period of use, SCHNEEBERGER uses high-grade bearing steels in which not just the running surfaces, but the complete carriage body are hardened. Even when subjected to loads exceeding their recommended levels, MONORAIL carriages maintain their specification as no plastic deformation can occur.

6 attachment holes per carriage

When a carriage is subjected to tensile forces, the rigidity achieved is largely dependent on the way that it is connected to its surrounding structure. In order to achieve the maximum degree of rigidity, all SCHNEEBERGER carriages have six threaded fixing holes in the top of the carriage.

Unique running characteristics

Particular attention was focused on the run-in area of the rollers from the unloaded to the loaded zone. This area was geometrically balanced to provide very smooth operation, i.e. minimum travel pulsation, pitch movement and noise for both low and high speed motion.

1.2 Features of the MONORAIL system

Complete sealing

MONORAIL carriages are equipped as standard with twin-lipped cross wipers on the ends and top and bottom longitudinal wipers. Together with additional sealing of the gaps between the front plate and the steel body, these provide an exceptionally efficient sealing system. The ingress of dirt is therefore effectively prevented and lubrication losses are reduced to a minimum, which results in a significant increase in service life. Correct function of the wipers is improved even further by the smooth, ground surface of all sides of the rail. SCHNEEBERGER also offers various solutions to close the rail fixing holes perfectly flush.

Rolling element recirculation parts made of synthetic material

The return passage of the rolling elements has a substantial influence on the running properties of the carriage. For this reason, all SCHNEEBERGER products are fitted with synthetic recirculation parts. Apart from the reduction in noise, the synthetic components have been designed to form an additional reservoir of lubricant. The additional lubricant can substantially extend the service life of the carriage.

Versatile lubrication connection

Carriages have a range of lubrication connections (on both sides on the front face, at the sides and on top) that can be prepared for connection to a lubrication supply in line with customers' specifications. This allows the connection of the lubrication supply to be connected in the best way to suit the type of lubrication and the specific installation involved. Where oil lubrication for special installation positions is required, both sides of the carriage can also be independently supplied with lubricant.

Integral racks

Rack systems offer a high-grade gear rack that is integrated into the guiderail. Single piece rail lengths of 6 metres and the possibility to butt joint rails means very long traverse lengths can be achieved with a high degree of accuracy. Integral construction reduces the amount of manufacturing, assembly and logistics compared with a system with a separate rack, which results in substantial cost savings.

It is now possible to construct a machine axis, that used to require three precision support surfaces with only two. It is no longer necessary to do any time consuming alignment work between the guide system and the rack.

1.2 Features of the MONORAIL system

Integrated linear scales

Combining a high-precision linear encoder with a MONORAIL guide rail results in an integrated measuring system that is simple to install without the need for any separate assembly or adjustment work. This provides cost-savings in the design, manufacture and maintenance of equipment. With its integrated systems, SCHNEEBERGER supplies solutions that offer a substantial reduction in complexity when constructing machine axes with direct linear scale systems.

Magneto-resistive measuring principle

The sensor is based on a specially adapted magneto-resistive measuring process. If any relative movement occurs between the sensor and the measuring scale, the change in field strength results in an easily measurable change in electrical resistance. Any interference caused by temperature, superimposed magnetic fields, displacement and ageing is minimised due to the bridge circuit. The sensing head works continuously, which ensures that the function of the sensor is not affected by any particles. The sensing process operates so well that no adjustment work is necessary after service exchange of a measuring head.

Position measurement close to the process

A good thermal connection between the measuring system and the bed of the machine is provided, firstly, by the extensive connection of the guiderail to the integral measuring scale and, secondly, by the rigid attachment of the guiderail to the bed of the machine. The benefit of this is that changes in the temperature of the bed of the machine are transferred directly to the measuring system. The good thermal interconnection between the measuring standard, the guiderail and thus the bed of the machine means that these machines do not require any reference points or temperature sensors to achieve excellent process stability.

Thermal expansion like steel

The magnetic measuring scale is installed in a groove in the rail section. Use of a specially adapted ferromagnetic material ensures that the longitudinal expansion of the scale, caused by thermal influences, is identical to the expansion of the steel bed of a machine.

The measuring standard is firmly attached at both ends to the guide rail and has exactly the same rate of expansion as the guide rail. No compensation for temperature is therefore required when machining steel parts.

1.2 Features of the MONORAIL system

One reading head for all sizes

The measuring scale is positioned identically on all rail sizes, meaning a single reading head can be used for all sizes of the product group concerned. The measuring scale is fixed very robustly in the rail and any effect of wear is taken by the reading head slider. All reading heads can be used on all models of rail supplied. These 3 points mean that only a small service stock of reading heads is needed to support a high volume of installations.

The new generation of reading heads offer increased waterproofness to IP68 and are made of rust-resistant materials. The connections between parts are also resistant to chemical substances. This ensures that SCHNEEBERGER AMS products retain their proven characteristics even in areas where they are constantly exposed to water, aggressive cooling lubricants or other emulsions.

Protected measuring scale

Following production, the integral measuring scale is protected from mechanical damage and magnetic interference by an extremely hard, non-magnetic cover strip. Using a special manufacturing process, the strip is laser welded to the rail which reliably protects the measuring scale from the effects of coolants and wear and tear. Measuring scales are consequently extremely robust and reliable.

Supply of complete axis sets

If required, SCHNEEBERGER products can be supplied as sets ready for installation. This means that customers receive complete rail and carriage sets built up and checked to their requirements. The protection required is also adapted to suit individual requirements. Assembly by the customer is therefore limited to essential tasks such as aligning the systems to the surrounding structure, connection to the drive elements and lubrication system as well as hooking up the sensor system connection to the control system.

Accuracy classes

The four accuracy classes allow the user to select both the guiderails and the carriages in line with specific application and design requirements. Accuracy classes define the running accuracy of the rails and determine the dimensional tolerances of the carriages.

-  G0 Highly accurate
-  G1 Very accurate
-  G2 Accurate
-  G3 Standard

Dimensional tolerances

MONORAIL carriages and rails are manufactured independently of each other, both to very tight tolerances, and are therefore completely interchangeable. This means that any carriage can be used on any rail of the same size without any influence on the preload level because the preload is determined by the rolling elements of the carriage. For the dimensional differences between any carriages on any rail, the values from column one of the following table are applicable.

Accuracy classes	Tolerances between carriages and rails	Max. dimensional difference between the carriages of a rail	Max. dimensional difference of the carriages between 2 or more rails, standard
	A/B ₂	ΔA/ΔB ₂	ΔA Standard
G0	± 5 μm	3 μm	10 μm
G1	± 10 μm	5 μm	20 μm
G2	± 20 μm	7 μm	40 μm
G3	± 30 μm	25 μm	60 μm
	Measured at the middle of the carriage and in any rail position	Measured at the middle of the carriage and at the same rail position	Measured at the middle of the carriage and at the same rail position

Matched carriages

All the carriages in a set are fitted one behind another on a production norm, and their top and side joint surfaces are ground smooth. Then the main dimensions A and B2 are measured on a test rail, and the carriages would then be paired up. There are two quality levels of carriage matching.

Matching carriages	Maximum dimensional differences between carriages in a pair
Version	$\Delta A/\Delta B2$
SLWGP0	3 μm
SLWGP1	5 μm

Matched rails

With "matched rails", we search the data to find suitable rails with similar characteristics. The criterion used for the selection process is the maximum difference in the run-off over the rail length, the so-called pairing tolerance. The range of all run-off reports for matched rails lies within this tolerance. Matched rails are available in four quality levels.

Matching rails	Mating tolerance
Version	
SLSGP0	5 μm
SLSGP1	10 μm
SLSGP2	15 μm
SLSGP3	20 μm

Running accuracy

The run-out accuracy of the carriages can be either linear or a wave-shaped within the tolerance limits. The maximum permissible deviation is defined by the accuracy class of a rail. The actual tolerance is determined from the above diagram as a function of rail length and accuracy class. Example: L 3 = 2000 mm with G2 accuracy gives a tolerance of 0.015 mm.

Straightness

To install profile guideway sections efficiently, it is essential to know the longitudinal degree of straightness and the curvature of a rail. As the rail section guideways are flexible components, they can deform longitudinally due to their own weight. Deformation can also be caused by the manufacturing process. In order to meet customers' installation requirements, rail straightness is optimised during manufacture. In addition to standard tolerances for rail deformation, SCHNEEBERGER offers special tolerances and / or inspection reports to a specific customer requirement.

Standard

Preload classes

The roller guideways are preloaded to enable them to work free of play under different load conditions. Basically, while preloading increases the rigidity of the guideway, it also affects operational life and increases the push force. SCHNEEBERGER guideways are available in various preload classes to address specific application requirements. The preload classes are dependent on the dynamic loading capacity C.

-  V0 Very low
-  V1 Low
-  V2 Medium
-  V3 High

Reference sides

Dependent on installation conditions of the products, the reference sides (attachment side) of the carriages and the section rails must be stated when placing an order. A drawing of the products is the basis for this. R1 means below or right, R2 means top or left.

-  R1 Reference bottom
-  R2 Reference top

2.1 Guiding

Features and options

Lubrication connections

Front plates and carriage bodies have a wide range of options for lubrication connection. It is therefore possible to optimise the lubrication supply to the carriage to meet structural design. Either a lubricating nipple or a central lubrication system can be screwed into each connection. As standard, all four tracks are lubricated through one connection.

Separate carriage lube connections for specific mounting positions

As a special feature for certain installation positions, SCHNEEBERGER systems provide for the independent lubrication of both sides of a carriage. This enhances the lubrication of the guideway and thus the service life of the machine.

Position of lubrication connection is defined with line of sight to the location side R1 in accordance with the picture.

-  Left center
-  Right center
-  Top left
-  Top right
-  Lower left side
-  Lower right side
-  Upper left side
-  Upper right side
-  Left side
-  Right side
-  Center (only for MR 25)

Lubrication as delivered condition

The carriages fitted to guideways can be supplied with a wide variety of lubricants according to the demands of the application, storage life and the final type of lubrication. For applications that provide continuous lubrication during installation and operating phases, oiling with oil (LN) or a light application of grease (LG) are enough.

A full application of grease (LV) is recommended for applications with manual lubrication.

Oil protect

Grease protect

Full greasing

Friction

Push force is an important value within the system properties of a guideway. In the case of profile guideways, this is largely dependent on the friction of the sealing system. There is also friction from rolling contact and sliding friction when changing direction and returning.

Application specific frictional forces, such as the type of lubrication, the amount of external load as well as speed, are also present.

To minimize friction, SCHNEEBERGER profile guideways are manufactured with special plastics. To adjust friction from seals, sealing systems are available which have been adjusted to the application.

Coating

For applications where special corrosion protection is necessary, such as in cleanroom applications or due to high levels of humidity or when increased wear resistance of the surface is required, MONORAIL carriages and rails are available in hard-chrome plated versions.

The main advantages of applying this electroplated coating are:

- Excellent corrosion protection
- Very good wear resistance and surface load bearing capacity
- Smooth and good emergency running characteristics due to its micropearl structure
- Exceptional adhesion
- Consistent depth of coating

Please note that holes, threads and operating elements are not chrome-plated.

General area of application under normal conditions of use

Movement	MR	BM
Maximum speed	3 m/s	5 m/s
Maximum acceleration	50 m/s ²	100 m/s ²

Higher values are permissible, but are dependent on the type of carriage, lubrication, position when installed, pretension and load. If this is the case, please contact a SCHNEEBERGER agency before proceeding.

Working environment	MR	BM
Working temperature	-40°C - +80°C	-40°C - +80°C
Storage temperature	-40°C - +80°C	-40°C - +80°C
Vibration / impact	30 g	30 g

Materials

Rail	Roller bearing steel, hardened surfaces
Carriage	Roller bearing steel, fully hardened
Rolling element	Roller bearing steel, fully hardened
Synthetic parts	POM, PAPA, TPU injection moulded

Special characteristics

The product concept for BZ MONORAIL guides provides for the manufacture of one-piece section rail guides with integral racks up to 6 metres in length. These one-piece modules can be linked together to make axes of any length.

A prerequisite for this is that the butt transition joints are machined in a process specially developed for this purpose. The individual parts are installed and aligned using fixtures that are available separately.

Special cross-members are available for the safe transportation of the long individual rails. These aluminium trusses are designed to remain attached to the component while the toothed rail is installed and aligned and only finally removed after the latter has been finally fixed in place. This ensures that the rack can be safely transported, fitted and aligned without suffering any deformation.

In comparison to other screwed systems, BZ has a large number of connections between the rack and the guide rail thanks to the use of BM MONORAIL guides with fixing holes spaced half the normal distance apart. This means that very high lateral forces can be absorbed and compact designs with a high power density are possible. For details see SCHNEEBERGER application catalog

Tooth quality

SCHNEEBERGER MONORAIL BZ guideways are fitted with integral racks. The gearing used is specially designed for machine tool applications. 19°31'42" helical gearing using module 2.5 and module 2.0 is employed to reduce noise and to achieve smooth running.

Dependent on customers' requirements, the teeth can be formed in two different qualities

For details see SCHNEEBERGER application catalog.

Order code:

DIN quality 5, hardened and ground **-Q5H-**

DIN quality 6, soft, milled **-Q6S-**

Comparison with other drive systems

Compared with other drive solutions used for linear movements, rack drives with BZ MONORAIL offer a number of benefits.

Where ball screws are concerned, these are a way of implementing several independent movements on a guide system.

BZ MONORAIL has a superior drive rigidity, which is independent of the length of the axis and independent of temperature thanks to the modular style of construction.

The rack elements are partially exchangeable when worn.

Accurately machined section rail guides and exceptionally precise rack segments result in a very smooth running pinion. The preload of the drive system thus remains constant along the full length and does not change in operation over time.

In combination with suitable motors or gearboxes, self-locking vertical drives can be implemented in the event of power failure.

In comparison to linear motors, BZ MONORAIL systems represent an economical and simple alternative that offers a high degree of efficiency. They are the ideal solution when machining a wide range of materials on long axes and in the face of adverse operating conditions.

General technical data

General technical data q.v. chapter 2.1 Technical Data Guiding

2.3 Guiding and measuring Magneto-resistive measuring method

How the measuring scale is made

The measuring strip contains two magnetic tracks: the fine incremental track with alternate N & S poles spaced at 200 μm intervals, and the reference track to determine the absolute position. The reference track can either have distance coded marks, marks set at regular intervals or even with only a single reference mark.

The measuring strip is fully integrated into the rail section. It is manufactured by first grinding a slot (1) into the finished rail section into which a strip of magnetic material (2) is inserted. This magnetic material is ground and magnetised (3). To protect the scale, a through hardened cover strip, that is magnetically permeable is used and welded to the rail (4).

Magneto-resistive position sensor

A relative movement between the sensor and the scale, results in a change in field strength in the magneto-resistive material leading to a change in electrical resistance that can be easily measured. The electrical circuitry of the Wheatstone bridge sensor elements means that interference from fluctuations in temperature, ageing and magnetic interference fields are kept to a minimum.

Two sinusoidal shaped signals with a 90° phase shift are obtained from the incremental magnetisation as a result of the arrangement of the sickle-shaped sensor elements. To improve accuracy, the signals from 104 individual elements, in line with the direction of measurement, are averaged. As the structure of the sensor is adapted to the magnetic division period, the influence of magnetic interference is heavily suppressed.

Positional independency of the sensor

All accuracy determining properties of the measuring signals (phase, differences in amplitude, harmonic wave characteristics, etc.) are anchored within the sensor. Therefore, even major deviations in position and twisting of the sensor do not lead to any reduction in signal quality: "The circuit remains stable."

The direct benefits are a simple exchange of the measuring head without any need for adjustment, enhanced resistance against vibration and shock as well as a wide tolerance band for the operation of the measuring heads.

2.3 Guiding and measuring Magneto-resistive measuring method

Operating method of automatic gain control (AGC)

The current amplitude (represented by the periodic signals) is continually determined in the electronic measuring system. In the event of any deviations, the amplitude is adjusted. Therefore, a standard output signal is provided even in exceptional cases (installation errors, external errors or removal of the slider).

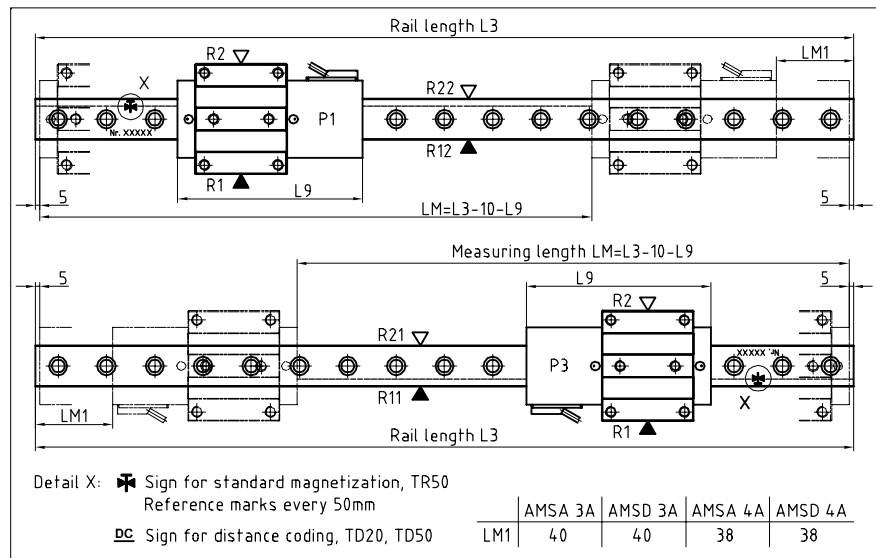

Reference point identification

The second track carries the AMS reference marks to determine the absolute position and reference the system. The accuracy of the reference points is decisive for the machine's zero or home position. A reference point is represented by three magnetic reference markers on the reference point magnetisation. The rising and falling flanks of the reference impulse each represent one piece of reference information. The third piece of reference information is redundant and is employed to increase the operational reliability of the reference point identification system. This operating principle thus suppresses any magnetic interference and, in dubious circumstances, does not provide a reference signal whenever any interference is encountered.

2.3 Guiding and measuring Features and options

Magnetization

AMS MONORAIL products are available with different reference marks that are surface-engraved by a laser. The illustration shows the position of the measuring carriage when registering the first reference mark.

- TR50** AMS with 50mm reference mark grid.
- TD50** AMS with distance coded reference marks
Reference marks spaced at 50.2/49.8/50.4/49.6/50.6/49.4/.../... mm.
- TD20** AMS with distance coded reference marks
Further reference marks spaced at 20.2/19.8/20.4/19.6/20.6/19.4/.../...mm.
This option is only available on measuring lengths of up to 2.8 metres.

- Reference points, 50mm pattern
- Distance code, 50mm pattern
- Distance code, 20mm pattern

Reading head position and attachment sides

In the order designation, SCHNEEBERGER denotes the attachment position of the reading head, the position of the scale and the reference sides of rail and carriage as they are shown in the drawing above. For drawings in portrait format, the drawing shown must be rotated counter-clockwise by 90°. The following information must be included when placing an order:

Attachment side of the rail and scale position:

- Reference bottom, scale bottom
- Reference bottom, scale top
- Reference top, scale bottom
- Reference top, scale top

Reading head position:

- External (mounting) housing right, reading head top
- External (mounting) housing left, reading head bottom

2.3 Guiding and measuring Read head interfaces

TSU/TRU/TMU analog voltage interfaces

The signals are shown inverted according to differential gain. The incremental signals are displaced by exactly 90° in their phasing. The levels after differential gain of the incremental signals and of the reference signals are 1 +/- 0.1 Vpp. The incremental signals supply valid values between 0.6 Vpp and 1.2 Vpp.

On production standards, the reference pulse is set symmetrically to the intersection of sine and cosine (at 45°). The width and the phasing of the reference pulse is limited as shown in the illustration. On the receiver side, the precision of the reference mark can thus be increased by the additional use of the incremental information.

This interface works with all standard control systems that support a 1 Vpp voltage interface.

TSD/TRD/TMD digital interfaces

The incremental signals A+, A-, B+, B- and the reference signals R+, R- transmit the data complementary according to RS 422. The illustration shows the positive signals. The levels of the individual signals are:

High > 2,5 V Low < 0,5 V

Rise and fall times are less than 20 ns. The minimum signal distances can be calculated from the maximum output frequency. The downstream electronics must be able to process the maximum output frequency without any problems.

Option **ZN**: The reference pulse is strictly synchronised with the incremental signals.

Option **ZF**: The reference pulse is extended to 550 µs +/- 50 µs. This option is used with evaluation electronics that cannot process multiple short-term reference impulses

The following combinations of **interpolation factor**, **maximum output frequency** and **reference impulse implementation** are available for all reading head interfaces.

- 010-80-ZN 5 µm, interpolation 10x, max. output frequency 8 MHz
- 050-80-ZN 1 µm, interpolation 50x, max. output frequency 8 MHz
- 250-80-ZN 0,2 µm, interpolation 250x, max. output frequency 8 MHz
- 010-80-ZF 5 µm, interpolation 10x, max. output frequency 8 MHz
- 050-80-ZF 1 µm, interpolation 50x, max. output frequency 8 MHz
- 250-80-ZF 0,2 µm, interpolation 250x, max. output frequency 8 MHz

Order code:

-010-80-ZN- interpolation 10fach, max. output frequency 8 MHz, reference impulse standard

Absolute interfaces TRH / TMH

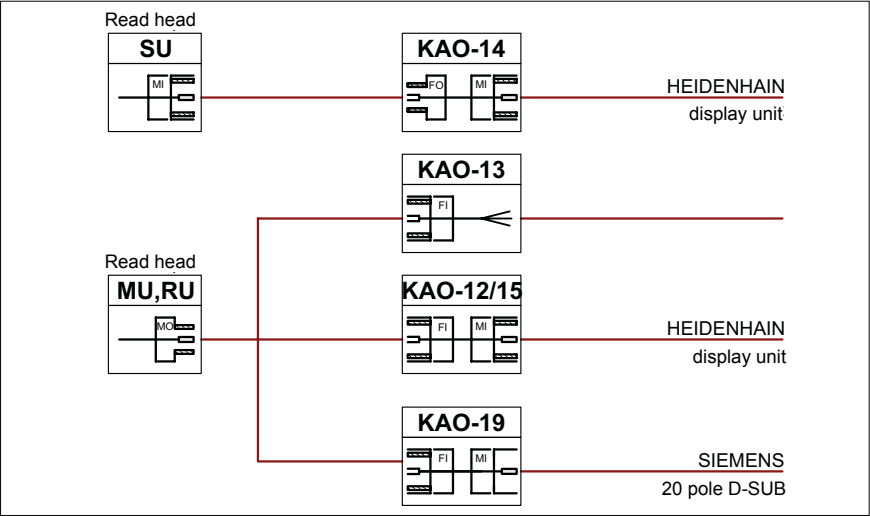

The absolute information can be transferred via fully digital interfaces, or via hybrid ones.

In the case of the fully digital SSI interface, the first channel (+pulse) sends a clock signal from the receiver to the measuring system; the second channel (+data) simultaneously sends the absolute position values from the measuring system to the sequential electronics unit.

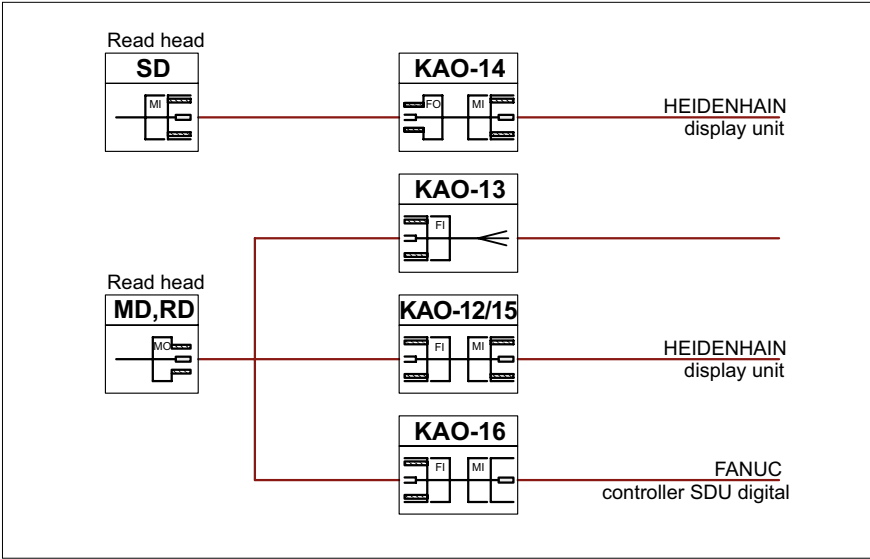

Another example is the fully digital "Fanuc Serial Interface". The motor controller simply sends a request signal (REQ), rather than a pulse. From this, the measuring system calculates the clock rate, which it uses to send the position data and the supplementary data (SD) to the receiver.

The SSI+SinCos hybrid interface only sends the digital absolute initial position when it is switched on, and from then on it sends incremental additional 1 Vpp signals.

The SSI interface can be connected to any commercial controller with an SSI interface. The "Fanuc Serial Interface" is designed for a Fanuc controller, and the SSI+SinCos interface is designed for a Siemens controller.

Cable for analog reading heads

Cable for digital reading heads

Cable for absolute reading heads

2.3 Guiding and measuring Accessories - Cables

KAO 12

Connecting cable, 12 pole, socket with female thread - plug with female thread

Order code: **KAO 12-xx**

xx = length in m, available lengths
3, 5, 10, 15 and 20m

Order example: KAO 12-5

KAO 13

Connecting cable, 12 pole, socket with female thread - open ends

Order code: **KAO 13-xx**

xx = length in m, available lengths
3, 5, 10, 15 and 20m

Order example: KAO 13-5

KAO 14

Extension cable, 12 pole, socket with male thread - plug with female thread

Order code: **KAO 14-xx**

xx = length in m, available lengths
3, 5, 10, 15 and 20m

Order example: KAO 14-5

KAO 15

Extension cable, 12 pole, socket with female thread - plug with male thread

Order code: **KAO 15-xx**

xx = Length in m, available lengths
3, 5, 10, 15 und 20m

Order example: KAO 15-5

KAO 16 for FANUC analog

Connecting cable, 12 pole, socket with female thread - FANUC plug

Order code: **KAO 16-xx**

xx = length in m, available lengths
3, 5, 10, 15 and 20m

Order example: KAO 16-5

KAO 19 for SIEMENS analog

Connecting cable, 12 pole, socket with female thread - D-SUB plug

Order code: **KAO 19-xx**

xx = length in m, available lengths
3, 5, 10, 15 and 20m

Order example: KAO 19-5

KAO 20 für FANUC absolut

Connecting cable, 17 pole, socket with female thread - HONDA plug

Order code: **KAO 20-xx**

xx = length in m, available lengths
3, 5, 10, 15 and 20m

Order example: KAO 20-5

2.3 Guiding and measuring Dimensions reading head

AMS 3B/4B

AMSABS 3B/4B

AMSA 3L

System properties

Material measure	Magnetically hard periodic N-S graduation
Signal period	200 µm
Working environment	
Protection class	IP 68
Working temperature	0°C - +70°C
Storage temperature	-20°C - +70°C
Vibration / impact	30 g

AMSA 3B und AMSA 4B

Accuracy

Accuracy class	+/- 5 µm / 1000 mm +/- 2 µm / 40 mm
Periodic deviation	+/- 0,7 µm
Resolution	max. 0,0625 µm
Hysteresis	< 0,5 - 1 µm

Interfaces

Analog	Voltage interface 1 Vpp
Supply voltage	5 V +/- 0,25 V
Current consumption	40 mA per reading head

AMSD 3B und AMSD 4B

Accuracy

Accuracy class	+/- 5 µm / 1000 mm +/- 2 µm / 40 mm
Periodic deviation	+/- 0,1 µm
Resolution	0,2 µm / 1,0 µm / 5,0 µm
Hysteresis	< 0,5 µm or digitally adjustable

Interfaces

Digital	Quadratur signals RS 422 with reference and error signals Reference pulse width 90° or 500 µs, ± 50 µs (for FANUC-CNC)
Supply voltage	5 V +/- 0,25 V
Current consumption	110 mA per reading head

2.3 Guiding and measuring General technical data

AMSABS 3B und 4B

Accuracy

Accuracy level	+/- 5 µm / 1000 mm +/- 2 µm / 40 mm
Periodic deviation	+/- 0,7 µm
Hysteresis	0,5µm – 1µm

Interfaces

Fully digital	e.g. cycle synchronous serial interface (SSI) or FANUC serial interface
Supply voltage	5 V ± 10% oder 24 V ± 10%
Current consumption	< 200 mA Ausgänge unbelastet
Resolution absolute	max. 0,977 µm
Hybrid	cycle synchronous serial interface with analogue voltage interface 1 Vpp
Supply voltage	5 V ± 10% oder 24 V ± 10%
Current consumption	< 200 mA Outputs unloaded
Resolution absolute	max. 0,0977 µm
Resolution analog	max. 0,0625 µm

AMSA 3L

Measuring element	Magnetically hard division
Signal period	200 µm
Reference marks	Synchronised to bore grid
Length	Standardised ≈ 3 m
Speed	1 m/s
Accuracy	$\Delta X_{pp} = \pm 7 \mu\text{m}$, $\Delta X_{s1s2} = \pm 5 \mu\text{m}$
Accuracy class	+/- 5 µm / 1000 mm +/- 2 µm / 40 mm
Working environment	
Protection class	IP 67
Operating temperature	0° - 70° C
Storage temperature	-20° - 70° C
Vibration / Shock	10 g

ΔX_{s1s2} : Features of the read head

ΔX_{pp} : max. deviation (the sum of all deviations)

2.4 Ordering information Order code and examples

Rails, carriages and accessories are always denoted by separate order codes. This also applies to different versions of rails and carriages.

The order codes for individual rails, carriages and accessories are in the data section of this catalogue from section 3 on. An attempt has been made here to code all versions by position in order to reduce the error rate in the ordering procedure.

Please use the following order schedule for orders that are to be supplied preassembled:

Order code for MONORAIL systems

Set consisting of:

/ n x S

/ n x W

/ n x W (optional)

/ n x S (optional)

/ n x W (optional)

/ n x Z

NB

S = complete order code for a rail

W = complete order code for a carriage

Z = complete order code for an accessory

"/" = indicates everything that belongs to a set in an order

n = number, indicates products of the same type

If no customer-related information is available, the rails and carriages are assembled in accordance with the sequence of the items ordered, i.e. the first rail at the top followed by the carriages on the first rail from left to right; then the second rail below it with the carriages from left to right et cetera, cf example 2.

This means that - if rail types and carriage types are different in the order placed - the carriages are always immediately below the relevant rail and in the assembly sequence from left to right.

Example 1: Order without a layout sketch - same types of component

2 identical rails each with 2 identical carriages, accessories (additional wipers) can be clearly allocated due to the number.

Plugs for the rails are always supplied unfitted.

Set consisting of:

/ 2 x MR S 35-N-G1-KC-R1-918-19-19-CN

/ 4 x MR W 35-B-G1-V3-R1-CN-S10-LN

/ 2 x MRK 35 (50 pieces)

/ 8 x ZCN 35

/ 4 x SN 6-45

2.4 Ordering information Order code and examples

Example 2: Order without a layout sketch - different types of component

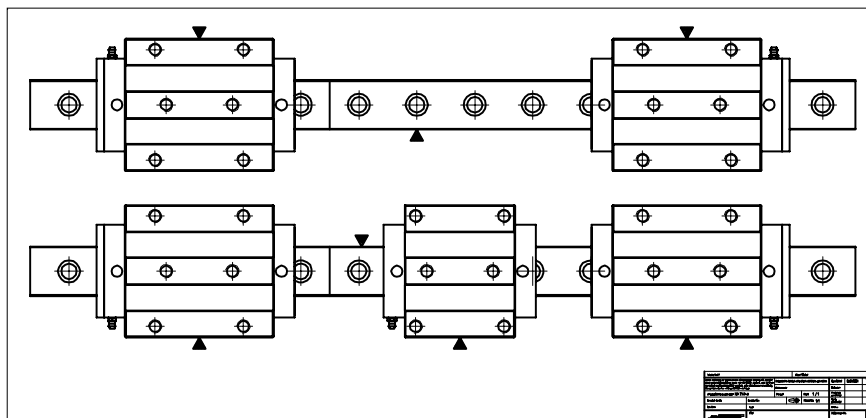

2 different rails and 2 different carriage types, uniform lubrication accessories, allocation and sequence of rails and carriages acc. to the sequence of the items in the order.

Set consisting of:

- / 1 x AMSA 3B S 35-N-G1-KC-R22-918-19-19-CN-TR50 (S1)
- / 1 x AMSA 3B W 35-B-P1-G1-V3-R1-CN-S10-LN-TSU (W1.1)
- / 1 x MR W 35-B-G1-V3-R1-CN-S10-LN (W1.2)
- / 1 x MR S 35-N-G1-KC-R1-918-19-19-CN (S2)
- / 2 x MR W 35-B-G1-V3-R1-CN-S10-LN (W2.1 + W2.2)
- / 2 x MRK 35 (50 Stück)
- / 4 x SN 6-45

Example 3: Order according to customer's layout sketch - different components

2 different rails, 2-part in each case, 5 different carriages.

The rails, carriages and accessories are impossible to allocate clearly without a layout sketch.

Set consisting of:

- / 1 x MR S 35-ND-G1-KC-R1-2478-19-19-CN (Teillängen L3 = 999mm/1479mm)
- / 1 x MR W 35-B-G1-V3-R2-CN-S13-LN
- / 1 x MR W 35-B-G1-V3-R2-CN-S23-LN
- / 1 x MR S 35-ND-G1-KC-R2-2478-19-19-CN (Teillängen L3 = 999mm/1479mm)
- / 1 x MR W 35-B-G1-V3-R1-CN-S12-LN
- / 1 x MR W 35-A-G1-V3-R1-CN-S12-LN
- / 1 x MR W 35-B-G1-V3-R1-CN-S22-LN
- / 5 x MRK 35 (125 Stück)
- / 4 x ZCN 35
- / 5 x SN 6

Important:

Apart from the order designation, further information is required for the troublefree order processing of special versions of MONO-RAIL systems. For this purpose, the order must include a layout sketch containing the following information:

- Part-lengths and the sequence of the segments for multipart rails
- Carriage type and position in the event of different carriage types on one rail
- Position of additional wipers, lubricating panels and lubricating accessories

Please note the following pointers to ensure that your MONORAIL guideways remain in peak working condition throughout their service life:

All SCHNEEBERGER products are precision components that are appropriately protected and packaged at the factory for the purpose of transport. Systems must therefore be protected from vibrations, shock and humidity when being transported and stored.

Please note the pointers on transport and installation that accompany the measuring systems.

Installation of the guideways and the covering of the holes in the rails must be carried out by qualified staff. Please refer to the Download section of www.schneeberger.com for pointers on installation.

Guideways must be adequately supplied with a lubricant that is suited to their movements and load profile as well as to the conditions under which they are expected to operate. If necessary, please contact a lubricant supplier, who will be pleased to advise you on the choice of the correct lubricant. Recommendations will also be found at www.schneeberger.com.

Prior to use, the compatibility of coolants and lubricants must be checked and verified by the user in order to preclude any detrimental effect(s) on the guideway. To protect them from dirt, hot metal chips and any direct contact with coolants, guideways should have covers fitted or be appropriately positioned.

If contact with dirt or coolant is anticipated in the course of machining operations, the fitting of additional wipers to the products is necessary. The long-term serviceability of these components must be assured by amended service intervals. Please refer to www.schneeberger.com for pointers on these products.

If the guideway gets into contact with hot chips an additional use of wipers is recommended. For further information please visit www.schneeberger.com.

The wipers on the ends as well as the additional wipers fitted to MONORAIL carriages must be examined at regular intervals for wear and tear and replaced if necessary.

Exceptional rigidity, high dynamic and static load-carrying capacities, outstanding smooth running and a fully sealed carriage are the main features of the MONORAIL MR Roller Guideway. Specifically designed for machine tools, these properties result in higher machining rates plus enhanced geometrical accuracy and surface quality of the machined component. The exceptional all-round rigidity of the products and the method of connection with the surrounding structure provide improved vibration behaviour at lower amplitudes therefore extending tool life.

Many years of experience in the design, production and use of roller-type guideways as well as the most advanced technologies in product development and volume production are consistently applied and continuously improved. The MONORAIL MR Guideway is a cost-effective solution that meets the demands of modern machine-tool design.

3.3 Accessories

MR Rails accessory details

Plastic plugs

MRK plastic plugs are used as a low-cost method of closing off the rail attachment holes. They can be fitted manually with fairly simple tools. Plastic plugs are recommended for use with protected axes or in environments with low levels of contamination, e.g. handling.

Quantity supplied: Pack of 25 pcs.

Order code: **MRK xx**

xx = Size, sample order: 6 x MRK 65

Brass plugs

Brass plugs are used in applications with increased contamination or external temperature influences, e.g., in the case of chip impact or whenever a smooth and gap-free rail surface is required.

A hydraulic MWH fitting tool is recommended for correct installation.

Order code: **MRS xx**

xx = Size, sample order: 48 x MRS 65

Steel plugs

Made of stainless steel, the two-part steel plugs are suitable for applications with greater demands on the mechanical stability of rail surfaces, e.g. when mechanical loads are higher or in open chip spaces. They combine the advantages of simple and very precise installation and a high degree of mechanical stability.

Function:

The clamping ring lies loosely on the screw head in the hole in the rail. When the slightly conical plug is pressed in, the ring is expanded to establish a positive frictional connection between the plug and the hole in the rail.

When fitted, the plug is flush with the rail surface where it ensures that the wipers operate to the optimum degree and have an optimum service life.

A hydraulic MWH fitting tool is necessary for correct installation.

Order code: **MRZ xx**

xx = Size, sample order: 48 x MRZ 65

Cover strip (spare part)

A SCHNEEBERGER MAC cover strip combines technical functionality with simple handling and neat appearance. Made of stainless spring steel, the strip is suitable for demanding applications with increased contamination or external temperature influences.

- It provides the following advantages:
- Reliable fixing along the length as it is clipped into a special groove
- Additional fixing of the ends of the strips using locking parts (EST xx-MAC)
- Very robust thanks to the substantial thickness of the material
- The strip free top surface of the rail can be used to support covers
- Can be fitted and removed several times
- Protection of the wipers during installation as the rail holes are recessed in the groove
- Available in any length up to 30m

When ordering guide rails with cover strips, they are included in the scope of supply.

Order code: **MAC xx-yy**

xx = Size, yy = Rail length in mm, sample order: 1 x MAC 65-4320

End piece for cover strip (spare part)

EST end pieces are used to close the ends of MAC cover strips. To do this, these plastic parts are inserted on both ends of the rail into the gap under the cover strip. Their special design prevents the ends of the cover strip from lifting and reduces the danger of injury on the sharp edges of the cover strip.

Order code: **EST xx-MAC**

xx = Size, sample order: 2 x EST 65-MAC

Securing band for cover strip (spare part)

The BSC securing band for cover strips is used to secure the ends when mechanical loads are high. To do this, the protruding band ends are cut off at right angles and burr-free, and a fastening thread is fitted to the front face of the rail.

Securing bands are used in applications with high vibration levels, with rails in open chip spaces, with rail lengths of less than 600 mm or for vertical fitting and the subsequent risk that EST endpieces could fall out.

The securing band also covers the ends of the cover strips and reduces the risk of injury on the sharp corners of the ends.

Order code: **BSC xx-MAC**

xx = Size, order example: 2 x BSC 65-MAC

3.3 Accessories

MR Rails accessory details

Installation tool for cover strip

A MWC fitting tool is used to simplify the fitting of an MAC cover strip. At the same time, it ensures that the cover strip sits securely in the rail groove without any gaps.

Order code: **MWC xx**

xx = Size, sample order: 1 x MWC 35

Installation tool for steel plugs

An MWH hydraulic cylinder is a single-action block cylinder used to create the required insertion force. A standard hydraulic unit that provides the pressure required for the insertion process is connected to the 1/4" threaded connection. The hydraulic cylinder fits all sizes of MWH fitting tool and must be ordered separately.

Order code: **MWH**

Sample order: 1 x MWH

Hydraulic cylinder for MWH

An MZH hydraulic cylinder is a single-action block cylinder used to create the required insertion force. A standard hydraulic unit that provides the pressure required for the insertion process is connected to the 1/4" threaded connection. The hydraulic cylinder fits all sizes of MWH fitting tool and must be ordered separately.

Order code: **MZH**

Sample order: 1 x MZH

Additional wiper NBR

ZCN nitrile wipers provide additional protection of the carriages in heavily contaminated environments. Thanks to their flexibility, they can be fitted directly over the rail cross section. ZCN wipers can also be used in combination with ASM metal wipers.

Order code: **ZCN xx**

xx = Size, sample order: 2 x ZCN 65

Additional wiper Viton

Like ZCN wipers, ZCV additional wipers provide extra protection of the carriages in heavily contaminated environments. Made of Viton® (fluoroelastomer), they are suitable for use with aggressive coolants.

As their flexibility allows them to be pushed over the rail cross section, retrofitting is possible without the need to remove the carriage from the rail. ZCV wipers can also be used in combination with ASM metal wipers.

Order code: **ZCV xx**

xx = Size, sample order: 2 x ZCV 65

Metal wiper

Made of stainless steel, ASM metal wipers are used to protect the sealing lips of carriages and additional wipers against hot metal chips. Large and loose dirt particles are pushed away and cannot get jammed due to the controlled dimension of the gap with the rail. Specially adapted types are available for rails using AMS measuring systems. Metal wipers are ideally used in combination with ZCN/ZCV additional wipers.

Order code: **ASM xx**

xx= Size, sample order: 1 x ASM 65

3.3 Accessories

MR Carriages accessory details

Bellows

Standard bellows are available for MONORAIL sizes MR 25 – MR 65, the purpose of which is to provide additional protection against dust and water splashes. The bellows are made of synthetic fabric coated on both sides with plastic. The bellows cover the entire length of the rail and their cross section matches the faceplate of the carriage. The external dimensions of the carriage are thus not exceeded by the bellows. Installation is simple and takes little time. A ZPL adapter plate is required to attach the bellows to the carriage. The adapter plate is screwed to the front plate of the carriage using a central screw. An EPL end plate is screwed to the end face of the rail. The bellows are fastened by two rivets to both the adapter plate and the front plate. Retrofitting can only be realised with induction hardened rails as the rail ends have to be drilled for the attachment of the EPL end plates.

When ordering a guideway with bellows, the fixing holes for the end plates are arranged in the rails.

Order code: **FBM xx-yy**

xx = Size, yy = Number of folds, sample order: 1 x FBM 65-137

Adapter plate for bellows (spare part)

The adapter plate is used to attach the bellows to the carriage and is included with every order for bellows. It is made of black anodized aluminium. On an MR 25 size, the adapter plate is also used for a lateral lubrication connection.

The outer contour of the adapter plate corresponds to that of the carriage front plate, the bellows and the end plate. The central fastening screw is included in the scope of supply.

Order code: **ZPL xx**

XX = Size, sample order: 2 x ZPL 65

End plate for bellows (spare part)

Made of black anodized aluminium, the end plate is used to attach the bellows to the end of the rail. It is included with every order for a set of bellows.

The attaching holes must be drilled in the rail if the bellows are to be retrofitted. For this reason, we recommend the use of induction-hardened rails for retrofits.

The external dimensions of the end plate correspond to that of the carriage front plate, the bellows and the adapter plate. Both fastening screws are supplied with the end plate.

Order code: **EPL xx**

xx = Size, sample order: 2 x EPL 65

Assembly rail

The assembly rail is required when a carriage has to be removed from the rail and then reinstalled during the installation of the MONORAIL.

It is advisable to leave the assembly rail in the carriage to protect the rollers against contamination.

If necessary, the two internal carriage attaching screws can be fitted and tightened through the two holes in the assembly rail.

Order code: **MRM xx**

xx = Size, sample order: 1 x MRM 65

Lubrication plate

An SPL lubrication plate is used wherever long lubrication intervals are required. Thanks to its integral oil reservoir, the rolling elements are supplied with an automatic and uniform supply of lubrication over an extended period.

It is ideally used in dry and clean environments as in handling technology or on the ancillary axes of machine tools.

The advantages are:

- Assured supply of lubrication in any installation position
- Long lubrication intervals of up to 5,000 km or 12 months according to use
- Refill apertures closed with screws
- Reduced outlay on lubrication and accessories
- Low environmental impact thanks to minimum consumption of lubricant
- Wipers have a long service life as oil is also supplied to the top surface of the rail

For maximum travel distances without re-lubrication, the lubrication plates are always used in pairs and the carriages are given an additional filling of grease.

The lubrication plates have the same dimensions as the carriage front plates and are installed in front of these. Retrofitting is possible.

Additional ZBN-U/ZBV-U wipers must be provided in applications in which particles of dirt can come into contact with the guideways.

Order code: **SPL xx-MR**

xx = Size, sample order: 2 x SPL 65-MR

Front plate (spare part)

The red front plates have two essential functions:

- To supply lubricant
- To seal a MONORAIL carriage

Lubrication can be supplied to the carriages through several integrated lubrication connection ports. Lubrication channels inside the front plate directly distribute the lubrication to the rollers.

Integral twin-lip cross wipers seal the carriage at the ends and prevent the ingress of dirt and the loss of lubrication. Because the cross wipers are subject to wear, the front plates have to be examined regularly and if necessary replaced.

Order code: **STP xx-EK**

xx = Size, sample order: 1 x STP 65-EK

3.4 Order key

Individual guide rails and carriages are ordered in accordance with the order codes described below.

Q.v. chapter 2.1 and chapter 3.3 for the order key for accessories.

Separate order codes are used in each case for rails, carriages and accessories. This also applies to different versions of rails and carriages.

All guide components are supplied individually as standard, i.e. unassembled.

If required, SCHNEEBERGER can also supply rails and carriages assembled incl. accessories as complete systems. Please note the ordering instructions in chapter 2.4 if this applies.

NB

Q.v. chapter 3.1 to 3.3 for an overview of types, details of shapes, available options and accessories.

Q.v. chapter 2 for a description of the options.

Very good dynamic characteristics and superb economy are the distinguishing features of the MONORAIL BM ball guideway. Thanks to the small number of transitions in the ball tracks, this novel design with its low number of optimally designed components provides outstanding running characteristics, which are distinguished by smooth running, low pulsation, reduced friction values and high travelling speeds.

The trapezoidal rail section guideway results in a highly rigid guideway and also substantially reduces the amount of maintenance required since parts subject to wear can be replaced without the need to dismantle the guideway. Complete sealing of the carriages is a guarantee of unparalleled reliability matched by a long service life. This robust and versatile guideway thus ideally complements the MONORAIL MR roller guideway.

Features of System MONORAIL BM

4.3 Accessories

BM Rails accessory details

Plastic plugs

BRK plastic plugs are used as a low-cost method of closing off the rail attachment holes. They can be fitted manually with fairly simple tools. Plastic plugs are recommended for use with protected axes or in environments with low levels of contamination, e.g. handling.

Quantity supplied: Pack of 25 pcs

Order code: **BRK xx**

xx = Size, sample order: 3 x BRK 35 (75 pcs)

Cover strip (spare part)

A BAC cover strip combines technical functionality with simple installation and neat appearance.

Made of stainless spring steel, the strip is suitable for demanding applications with enhanced mechanical and thermal loading.

It provides the following advantages:

- Reliable fixing along the length as it is clipped into a special groove
- Additional fixing of the ends of the strips using locking parts (EST xx-BAC)
- Very robust due to the substantial thickness of the material
- Can be fitted and removed several times
- Protection of the wipers during installation as the rail fixing holes are recessed in the groove
- In any length up to 30 m available

When ordering guide rails with cover strips, they are included in the scope of supply.

Order code: **BAC xx-yy**

xx = Size, yy= Rail length in mm, sample order: 1 x BAC 35-4560

End piece for cover strip (spare part)

EST end pieces are used to close the ends of BAC cover strips. To do this, these plastic parts are inserted on both ends of the rail into the gap under the cover strip. Their special design prevents the ends of the cover strip from lifting and reduces the danger of injury on the sharp edges of the cover strip.

Order code: **EST xx-BAC**

xx = Size, sample order: 2 x EST 35-BAC

Securing band for cover strip (spare part)

The BSC securing band for cover strips is used to secure the ends when mechanical loads are high. To do this, the protruding band ends are cut off at right angles and burr-free, and a fastening thread is fitted to the front face of the rail.

Securing bands are used in applications with high vibration levels, with rails in open chip spaces, with rail lengths of less than 600 mm or for vertical fitting and the subsequent risk that EST endpieces could fall out.

The securing band also covers the ends of the cover strips and reduces the risk of injury on the sharp corners of the ends.

Order code: **BSC xx-MAC**

xx = Size, order example: 2 x BSC 65-MAC

Installation tool for cover strip

A BWC fitting tool is used to simplify the fitting of an MAC cover strip. At the same time, it ensures that the cover strip sits securely in the rail groove without any gaps.

Order code: **BWC xx**

xx = Size, sample order: 1 x BWC 35

4.3 Accessories

BM Carriages accessory details

Additional wiper NBR

Additional ZBN-U nitrile wipers provide additional protection of the carriages in heavily contaminated environments. Due to their flexibility, they can be fitted directly over the rail cross section. It is therefore not necessary to remove the carriage from the rail.

ZBN-U wipers can also be used in combination with ABM metal wipers.

Order code: **ZBN xx-U**

xx = Size, sample order: 2 x ZBN 35-U

Additional wiper Viton

Like ZBN-U wipers, ZBV-U additional wipers provide additional protection of the carriages in heavily contaminated environments. Made of Viton® (fluoroelastomer), they are also suitable for use with aggressive coolants. Since they can be pushed over the rail cross section due to their flexibility, retrofitting is possible without any need to remove the carriage from the rail. ZBV-U wipers can also be used in combination with ABM metal wipers.

Order code: **ZBV xx-U**

xx = Size, sample order: 2 x ZBV 35-U

Metal wiper

Made of stainless steel, ABM metal wipers are used to protect the sealing lips of carriages and additional wipers against hot metal chips. Large and loose dirt particles are pushed away and cannot get jammed due to the controlled dimension of the gap with the rail. Specially adapted types are available for rails using AMS measuring systems. Metal wipers are ideally used in combination with ZBN-U/ZCV-U additional wipers.

Order code: **ABM xx**

xx= Size, sample order: 1 x ABM 35

Bellows

A standard FBB bellows is available for MONORAIL sizes BM 20 – BM 45, the purpose of which is mainly to provide additional protection against dust and water splashes. The bellows are made of synthetic fabric coated on both sides with plastic. The bellows cover the entire length of the rail profile matching the relevant faceplate of the carriage. The external dimensions of the carriage are not exceeded by the bellows. Installation is simple and takes little time. A ZPB adapter plate is required to attach the bellows to the carriage. The adapter plate is screwed to the front plate of the carriage using a central screw. An EPB end plate is screwed to the end face of the rail. The bellows are fastened by two rivets to both the adapter plate and the front plate. The required adapter and end plates, attachment screws and rivets are supplied with each order for a complete set of bellows. The attachment holes for the end plate are also prepared in the rail when a guideway with bellows is ordered.

Order code: **FBB xx-yy**

xx = Size, yy = Number of folds, sample order: 1 x FBB 35-146

Adapter plate for bellows (spare part)

A ZPB adapter plate is used to attach FBB bellows to the carriage and is included with every order for a bellows. It is made of black anodized aluminium. The outer contour of the adapter plate corresponds to that of the carriage front plate, the bellows and the end plate. The central fastening screw is included in the scope of supply.

Order code: **ZPB xx**

xx = Size, sample order: 2 x ZPB 35

End plate for bellows (spare part)

Made of black anodized aluminium, an EPB end plate is used to attach the FBB bellows to the end of the rail. It is included with every order for a set of bellows. The attachment holes must be drilled in the rail if the bellows are to be retrofitted. For this reason, we recommend the use of induction-hardened rails for retrofits. The outer contour of the end plate corresponds to that of the carriage front plate, the bellows and the adapter plate. Both fastening screws are supplied with the end plate.

Order code: **EPB xx**

xx = Size, sample order: 2 x EPB 35

4.3 Accessories

BM Carriages accessory details

Assembly rail

An MBM assembly rail is required when a carriage has to be removed from the rail and then reinstalled during the installation of the MONORAIL guideway.

It is advisable to leave the assembly rail in the carriage to protect the balls against contamination. If necessary, the two internal carriage attaching screws can be fitted and tightened through the two holes in the assembly rail.

Order code: **MBM xx**

xx = Size, sample order: 1 x MBM 35

Lubrication plate

An SPL lubrication plate is used wherever long lubrication intervals are required. Thanks to its integral oil reservoir, the rolling elements are supplied with an automatic and uniform supply of lubrication over an extended period.

It is ideally used in dry and clean environments as in handling technology or on the ancillary axes of machine tools.

The advantages are:

- Assured supply of lubrication in any installation position
- Long lubrication intervals of up to 5,000 km or 12 months according to use
- Refill apertures closed with screws
- Reduced outlay on lubrication and accessories
- Low environmental impact thanks to minimum consumption of lubricant
- Wipers have a long service life as oil is also supplied to the top surface of the rail

For maximum travel distances without re-lubrication, the lubrication plates are always used in pairs and the carriages are given an additional filling of grease.

The lubrication plates have the same dimensions as the carriage front plates and are installed in front of these. Retrofitting is possible.

Additional ZBN-U/ZBV-U wipers must be provided in applications in which particles of dirt can come into contact with the guideways.

Order code: **SPL xx-BM**

xx = Size, sample order: 2 x SPL 35-BM

Cross wiper for front plate (spare part)

QAS twin-lip cross wipers, integrated into the end plate, seal the carriage at the ends, thus preventing the ingress of dirt and the loss of lubricant.

As the cross wipers are subject to normal wear, they must be examined regularly and replaced if necessary.

Order code: **QAS xx-STB**

xx = Size, sample order: 1 x QAS 35-STB

4.4 Order key

Individual guide rails and carriages are ordered in accordance with the order codes described below.
Q.v. chapter 2.1 and chapter 4.3 for the order key for accessories.
Separate order codes are used in each case for rails, carriages and accessories. This also applies to different versions of rails and carriages.
All guide components are supplied individually as standard, i.e. unassembled.
If required, SCHNEEBERGER can also supply rails and carriages assembled incl. accessories as complete systems. Please note the ordering instructions in chapter 2.4 if this applies.

The MONORAIL BM WR/SR systems are linear guides made from corrosion-resistant steel, and are based on the MONORAIL BM ball profiled linear guideway. They were developed specially for specifications which would exceed the requirements of ordinary coatings for linear guideways. This is the case when the performance of the product is impaired by corrosion during processes.

In applications such as machines for foodstuffs, medical technology and cleanrooms MONORAIL BM WR/SR products ensure that the operation of linear axes is clean, accurate, long-term and free of problems.

Furthermore, the MONORAIL WR/SR has the same tried and tested properties of the MONORAIL BM, such as the most effective operating characteristics, high travel speeds and a long operating life.

5.4 Order key

Individual guide rails and carriages are ordered in accordance with the order codes described below.

Q.v. chapter 2.1 and chapter 5.3 for the order key for accessories.

Separate order codes are used in each case for rails, carriages and accessories. This also applies to different versions of rails and carriages.

All guide components are supplied individually as standard, i.e. unassembled.

If required, SCHNEEBERGER can also supply rails and carriages assembled incl. accessories as complete systems. Please note the ordering instructions in chapter 2.4 if this applies.

With its BZ MONORAIL, SCHNEEBERGER offers linear guide systems that extend the characteristic properties of the company's BM MONORAIL profile rail guides to include the advantages of an integral and high-precision rack drive.

Customers gain the following decisive benefits:

- One-piece system up to 6000 mm long
- High-quality gear rack (hardened and ground)
- Cost savings of up to 25% due to reduced outlay on manufacturing and assembly
- Superlative operating properties, high load carrying capacity and a long service life based on our proven MONORAIL linear guides
- Oriented towards customer requirements due to the large number of carriage types available with BM ball guides and a comprehensive range of accessories and customised gear types and grades.

6.3 Accessories

BZ Rails accessory details

Plastic plugs

If required, the attachment holes on the sides of BZ rails can be closed with BRK plastic plugs. However, this is not essential as the holes are located outside the carriage's area of movement.

Scope of supply: Pack of 25 pcs

Order code: **BRK xx**

xx = Size, sample order: 3 x BRK 25 (75 pcs)

Pinion with through bore

The pinion has hardened and ground helical teeth in quality 6. The bore is soft and can be machined by customers to suit their individual requirements.

This pinion is also available with a keyway (see next paragraph).

For dimensions, please refer to the BZR xx columns in the table of dimensions.

Order code:

Size 25: **BZR 25-2.0-20-S6**

Size 35: **BZR 35-2.5-20-S6**

Pinion with through bore and keyway

This pinion is similar to the pinion with a through bore but also has a keyway to specification DIN 6885-A to facilitate its attachment to a drive shaft.

For dimensions, please refer to the BZR xx-K columns in the table of dimensions.

Order code:

Size 25: **BZR 25-2.0-20-S6-K**

Size 35: **BZR 35-2.5-20-S6-K**

Pinion with shaft

This pinion with hardened and ground helical teeth in quality 6 has a plain shaft. This is left unhardened to permit subsequent machining.

This pinion is also available with a keyway (see next paragraph).

For dimensions, please refer to the BZR xx-S columns in the table of dimensions.

Order code:

Size 25: **BZR 25-S-2.0-20-S6**

Size 35: **BZR 35-S-2.5-20-S6**

Pinion with shaft and keyway

This pinion is similar to the pinion with a shaft, but also has a keyway to specification DIN 6885-A for attachment.

For dimensions, please refer to the BZR xx-S-K columns in the table of dimensions.

Order code:

Size 25: **BZR 25-S-2.0-20-S6-K**

Size 35: **BZR 35-S-2.5-20-S6-K**

6.3 Accessories

BZ Rails accessory details

Lubricating pinion

Felt lubricating pinions are available to lubricate the racks. These can be supplied with oil either manually or with an automatic lubrication system.

Order code:

Size 25: **BZR 25-L-2.0-16-S**

Size 35: **BZR 35-L-2.5-16-S**

Pinion hub for lubricating pinion

Pinion hubs are used in combination with lubricating pinions. Lubricating oil can be fed through the hub to the felt pinion through via a special arrangement of lubricating channels.

Order code:

Size 25: **BZR 25-LN**

Size 35: **BZR 35-LN**

Assembly fixture for BZ systems

An assembly fixture is available for the alignment of butt-jointed BZ rails. It consists of a rack segment designed to match BZ teeth. During assembly, the segment is inserted into the racks on both sides of the butt joint which connects and aligns them precisely.

Order code:

Size 25: **BZM 25-2.0-7-S5**

Size 35: **BZM 35-2.5-6-S5**

6.4 Order key

Individual guide rails and carriages are ordered in accordance with the order codes described below.

All MONORAIL BM carriages can be used with BZ rails.

Q.v. chapter 2.1, chapter 4.3 and 6.3 for the order key for accessories.

Separate order codes are used in each case for rails, carriages and accessories. This also applies to different versions of rails and carriages.

All guide components are supplied individually as standard, i.e. unassembled.

If required, SCHNEEBERGER can also supply rails and carriages assembled incl. accessories as complete systems. Please note the ordering instructions in chapter 2.4 if this applies.

Q.v. chapter 2 for a description of the options.

SCHNEEBERGER's MONORAIL AMS 3B is an integrated measuring system for distance measurement for use on all protected machine tool axes with high demands on system precision. Mechanically the AMS 3B is based on SCHNEEBERGER's MONORAIL MR roller guide with lengths up to 6 metres. The integration of the measurement system allows very compact axes to be put together.

A digital interface with a range of different resolutions for different maximum speeds, and an analog 1Vpp (200 μm signal period) interface are available as interfaces with the control system. Reference marks can be set at 50mm intervals or distance coded. Different options for carriage lubrication and sealing permit the best possible degree of adaptation to application requirements. The easily interchangeable reading head is identical for all sizes.

Features of System MONORAIL AMS 3B

Product overview AMS 3B Rails

						
	N standard	NU with tapped holes at the bottom	C for cover strip			
Buildsizes / Rail build forms						
Size 25	AMS 3B S 25-N	AMS 3B S 25-NU	AMS 3B S 25-C			
Size 35	AMS 3B S 35-N	AMS 3B S 35-NU	AMS 3B S 35-C			
Size 45	AMS 3B S 45-N	AMS 3B S 45-NU	AMS 3B S 45-C			
Size 55	AMS 3B S 55-N	AMS 3B S 55-NU	AMS 3B S 55-C			
Size 65	AMS 3B S 65-N	AMS 3B S 65-NU	AMS 3B S 65-C			
Features						
Screwable from above	●		●			
Screwable from below		●				
Small assembly effort		●	●			
Great single-part system length	●	●	●			

Available options for AMS 3B Rails

Details see chapter 2

Accuracy

-  G0 Highly accurate
-  G1 Very accurate
-  G2 Accurate
-  G3 Standard

Straightness

-  KC Standard

Coating

-  CN None
-  CH Hard chromium

Locating sides

-  R11 Ref.bottom, scale bottom
-  R12 Ref.bottom, scale bottom
-  R21 Ref.top, scale bottom
-  R22 Ref.top, scale top

Magnetization

-  TR50 50 mm pattern
-  T020 20 mm code
-  TD50 50 mm code

Available accessories for AMS 3B Rails

Details see chapter 3.3

Plugs

Cover strips

Assembly tools

7.1 Overview of types, sizes and available options AMS 3B Carriages

Product overview AMS 3B Carriages

							
	A standard	B standard, long	C compact, high	D compact, high, long	E compact, high, for lateral fixing	F compact	G compact, long
Buildsizes / Carriage build forms							
Size 25	AMS 3B W 25-A	AMS 3B W 25-B	AMS 3B W 25-C	AMS 3B W 25-D	AMS 3B W 25-E	AMS 3B W 25-F	AMS 3B W 25-G
Size 35	AMS 3B W 35-A	AMS 3B W 35-B	AMS 3B W 35-C	AMS 3B W 35-D	AMS 3B W 35-E		
Size 45	AMS 3B W 45-A	AMS 3B W 45-B	AMS 3B W 45-C	AMS 3B W 45-D		AMS 3B W 45-F	
Size 55	AMS 3B W 55-A	AMS 3B W 55-B	AMS 3B W 55-C	AMS 3B W 55-D			AMS 3B W 55-G
Size 65	AMS 3B W 65-A	AMS 3B W 65-B	AMS 3B W 65-C	AMS 3B W 65-D			
Features							
Screwable from above	•	•	•	•		•	•
Screwable from below	•	•					
Screwable from the side					•		
For high loads and moments		•		•			•
For medium loads and moments	•		•		•	•	
For limited installation space						•	•

Available options for AMS 3B Carriages

Details see chapter 2

Accuracy

-  G0 Highly accurate
-  G1 Very accurate
-  G2 Accurate
-  G3 Standard

Preload

-  V1 Low
-  V2 Medium
-  V3 High

Reference side

-  R1 Ref. at bottom
-  R2 Ref. on top

Coating

-  CN None
-  CH Hard chromium

Lube connections

-  S10 Left center
-  S20 Right center
-  S11 Top left
-  S21 Top right
-  S12 Lower left side
-  S22 Lower right side

-  S13 Upper left side
-  S23 Upper right side
-  S32 Left side
-  S42 Right side

Lubrication

-  LN Oil protect
-  LG Grease protect
-  LV Full greasing

Interface

-  TMU TMU, analog, 0.3m
-  TRU TRU, analog, 3m
-  TSU TSU, analog, 3m
-  TMD TMD, digital, 0.3m
-  TRD TRD, digital, 3m
-  TSD TSD, digital, 3m

Reading head position

-  P1 Right top
-  P3 Left bottom

Available accessories for AMS 3B Carriages

Details see chapter 2.1 and 3.3

Additional wipers	Bellows	Assembly rails	Lubrication plates
Front plates	Lube nipples	Lube adapters	Cables

7.4 Order key

Analog

Individual guide rails and carriages are ordered in accordance with the order codes described below.

AMS 3B carriages consist of guide carriage, casing and reading head.

All MONORAIL MR carriages can also be used with AMS 3B rails.

Q.v. chapter 2 and chapter 3.3 for the order key for accessories.

Separate order codes are used in each case for rails, carriages and accessories. This also applies to different versions of rails and carriages.

All guide components are supplied individually as standard, i.e. unassembled.

If required, SCHNEEBERGER can also supply rails and carriages assembled incl. accessories as complete systems. Please note the ordering instructions in chapter 2.4 if this applies.

The order code for the AMS 3B systems is made up of two groups. For the AMS system with an analog interface, the code is AMSA. The AMS system with a digital interface is referred to as AMSD.

NB

Q.v. chapter 7.1 to 7.3 for an overview of types, details of shapes, available options and accessories.

Q.v. chapter 2 for a description of the options.

If possible, standard lengths are preferred for L3 rail length.

These are calculated with the table values in chapter 7.2 using the following formula: $L3 = n \times L4 + L5 + L10 \leq L3_{max}$.

Q.v. chapter 2 for a description of the options.

SCHNEEBERGER's MONORAIL AMS 4B is an integrated measuring system for distance measurement for use on all protected machine tool axes with lower machining forces and high demands on system precision. Mechanically the AMS 4B is based on SCHNEEBERGER's MONORAIL BM ball guide with lengths up to 6 metres. The integration of the measurement system allows very compact axes to be put together. A digital interface with a range of different resolutions for different maximum speeds, and an analog 1Vpp (200 μ m signal period) interface are available as interfaces with the control system. Reference marks can be set at 50mm intervals or distance coded. Different options for carriage lubrication and sealing permit the best possible degree of adaptation to application requirements. The easily interchangeable reading head is identical for all sizes.

Features of System MONORAIL AMS 4B

8.4 Order key

Analog

Individual guide rails and carriages are ordered in accordance with the order codes described below.

AMS 4B carriages consist of guide carriage, casing and reading head.

All MONORAIL BM carriages can also be used with AMS 4B rails.

Q.v. chapter 2 and chapter 4.3 for the order key for accessories.

Separate order codes are used in each case for rails, carriages and accessories. This also applies to different versions of rails and carriages.

All guide components are supplied individually as standard, i.e. unassembled.

If required, SCHNEEBERGER can also supply rails and carriages assembled incl. accessories as complete systems. Please note the ordering instructions in chapter 2.4 if this applies.

The order code for the AMS 4B systems is made up of two groups. For the AMS system with an analog interface, the code is AMSA. The AMS system with a digital interface is referred to as AMSD.

NB

Q.v. chapter 8.1 to 8.3 for an overview of types, details of shapes, available options and accessories.

Q.v. chapter 2 for a description of the options.

If possible, standard lengths are preferred for L3 rail length.

These are calculated with the table values in chapter 8.2 using the following formula: $L3 = n \times L4 + L5 + L10 \leq L3_{max}$.

With the MONORAIL AMSABS 3B, SCHNEEBERGER provides an integrated measuring system for absolute distance measurement for use in automation engineering, mechanical handling technology and machine tool engineering, whereby high force absorption and precise distance measurements are required in small assembly spaces. From a mechanical point of view, the AMSABS 3B is based on the MONORAIL MR roller guide up to a length of 6m. The distance measurement system's compact housing facilitates the construction of highly compact axes.

SCHNEEBERGER provides a fully digital interface with various cable lengths in order to connect it with the SSI, SSI+SinCos and FANUC control units.

Various options regarding lubrication and sealing of the measuring carriages mean that optimal adjustments can be made to the requirements of the application. The easily exchangeable reading head is identical and replaceable for all sizes.

9.4 Order key

Individual guide rails and carriages are ordered in accordance with the order codes described below.

AMSABS 3B carriages consist of guide carriage, casing and reading head.

All MONORAIL MR carriages can also be used with AMSABS 3B rails.

Q.v. chapter 2 and chapter 3.3 for the order key for accessories.

Separate order codes are used in each case for rails, carriages and accessories. This also applies to different versions of rails and carriages.

All guide components are supplied individually as standard, i.e. unassembled.

If required, SCHNEEBERGER can also supply rails and carriages assembled incl. accessories as complete systems. Please note the ordering instructions in chapter 2.4 if this applies.

NB

Q.v. chapter 9.1 to 9.3 for an overview of types, details of shapes, available options and accessories.

Q.v. chapter 2 for a description of the options.

If possible, standard lengths are preferred for L3 rail length.

These are calculated with the table values in chapter 9.2 using the following formula: $L3 = n \times L4 + L5 + L10 \leq L3_{max}$.

Q.v. chapter 9.1 to 9.3 for an overview of types, details of shapes, available options and accessories.

Q.v. chapter 2 for a description of the options.

For detailed information about current configuration options for the interfaces, please visit our website at www.schneeberger.com.

With the MONORAIL AMSABS 4B, SCHNEEBERGER provides an integrated measuring system for absolute distance measurement for use in automation engineering, mechanical handling technology and machine tool engineering, whereby high force absorption and precise distance measurements are required in small assembly spaces. From a mechanical point of view, the AMSABS 4B is based on the MONORAIL BM roller guide up to a length of 6m. The distance measurement system's compact housing facilitates the construction of highly compact axes.

SCHNEEBERGER provides a fully digital interface with various cable lengths in order to connect it with the SSI, SSI+SinCos and FANUC control units.

Various options regarding lubrication and sealing of the measuring carriages mean that optimal adjustments can be made to the requirements of the application. The easily exchangeable reading head is identical and replaceable for all sizes.

Available accessories for AMSABS 4B Rails

Details see chapter 4.3

Plugs

Cover strips

Assembly tools

10.1 Overview of types, sizes and available options

AMSABS 4B Carriages

Product overview AMSABS 4B Carriages

						
	A standard,	B standard, long	C compact, high	D compact, high, long	F compact	
Buildsizes / Carriage build forms						
Size 15	AMSABS 4B W 15-A		AMSABS 4B W 15-C		AMSABS 4B W 15-F	
Size 20	AMSABS 4B W 20-A	AMSABS 4B W 20-B	AMSABS 4B W 20-C	AMSABS 4B W 20-D		
Size 25	AMSABS 4B W 25-A	AMSABS 4B W 25-B	AMSABS 4B W 25-C	AMSABS 4B W 25-D		
Size 30	AMSABS 4B W 30-A	AMSABS 4B W 30-B	AMSABS 4B W 30-C	AMSABS 4B W 30-D		
Size 35	AMSABS 4B W 35-A	AMSABS 4B W 35-B	AMSABS 4B W 35-C	AMSABS 4B W 35-D		
Size 45	AMSABS 4B W 45-A	AMSABS 4B W 45-B	AMSABS 4B W 45-C	AMSABS 4B W 45-D		
Features						
Screwable from above	•	•	•	•	•	
Screwable from below	•	•				
For high loads and moments		•		•		
For medium loads and moments	•		•		•	
For limited installation space					•	

Available options for AMSABS 4B Carriages

Details see chapter 2

Accuracy

-  G0 Highly accurate
-  G1 Very accurate
-  G2 Accurate
-  G3 Standard

Preload

-  V0 Very low
-  V1 Low
-  V2 Medium
-  V3 High

Reference side

-  R1 Ref. at bottom
-  R2 Ref. on top

Coating

-  CN None
-  CH Hard chromium

Lube connections

-  S10 Left center
-  S20 Right center
-  S11 Top left
-  S21 Top right
-  S12 Lower left side
-  S22 Lower right side

-  S13 Upper left side
-  S23 Upper right side
-  S32 Left side
-  S42 Right side

Lubrication

-  LN Oil protect
-  LG Grease protect
-  LV Full greasing

Interface

-  TMH, absolute, 0.3m
-  TRH, absolute, 3m

Reading head position

-  P1 Right top
-  P3 Left bottom

Available accessories for AMSABS 4B Carriages

Details see chapter 2.1 und 4.3

Additional wipers
Front plates

Bellows
Lube nipples

Assembly rails
Lube adapters

Lubrication plates
Cables

10.2 Technical data and options

AMSABS 4B Size 15

AMSABS 4B S 15 Dimensions

	AMSABS 4B S 15-ND	AMSABS 4B S 15-CD				
B1: Rail width	15	15				
J1: Rail height	15.7	15.7				
L3: Rail length max.	1500	1500				
L4: Spacing of fixing holes	60	60				
L5/L10: Position of first/last fixing hole	28.5	28.5				
Gew.: Rail weight, specific (kg/m)	1.4	1.3				

Available options for AMSABS 4B S 15

AMSABS 4B W 15 Dimensions and capacities

	AMSABS 4B W 15-A	AMSABS 4B W 15-C	AMSABS 4B W 15-F			
A: System height	24	28	24			
A1: Half width of housing on opposite side	16.5	16.5	16.5			
A2: Half width of housing on reading head side	21.5	21.5	21.5			
A3: Projection of reading head	17.5	17.5	17.5			
B: Carriage width	47	34	34			
B2: Distance between locating faces	16	9.5	9.5			
C1: Position of center front lube hole	4	8	4			
C3: Position of lateral lube hole	3.7	7.7	3.7			
C4: Position of lateral lube hole	9.3	11.3	11.3			
C7: Position of top lube hole	9.05	11.05	11.05			
J: Carriage height	20.2	24.2	20.2			
L1: Exterior fixing hole spacing	30	26	26			
L2: Interior fixing hole spacing	26	-	-			
L9: Carriage length with housing	149.6	149.6	149.6			
L11: Housing length	101.5	101.5	101.5			
Lw: Inner carriage body length	39.6	39.6	39.6			
N: Lateral fixing hole spacing	38	26	26			
O: Reference face height	7	6	5.5			
Ts: Front plate thickness	8.5	8.5	8.5			

Capacities and weights

C0: Static load capacity (N)	19600	19600	19600			
C100: Dynamic load capacity (N)	9000	9000	9000			
MOQ: Static cross moment capacity (Nm)	181	181	181			
MOL: Static longitud. moment capacity (Nm)	146	146	146			
MQ: Dyn. cross moment capacity (Nm)	83	83	83			
ML: Dyn. longitud. moment capacity (Nm)	67	67	67			
Gew: Carriage weight (kg)	0.4	0.5	0.4

10.4 Order key

Individual guide rails and carriages are ordered in accordance with the order codes described below.

AMSABS 4B carriages consist of guide carriage, casing and reading head.

All MONORAIL BM carriages can also be used with AMSABS 4B rails.

Q.v. chapter 2 and chapter 4.3 for the order key for accessories.

Separate order codes are used in each case for rails, carriages and accessories. This also applies to different versions of rails and carriages.

All guide components are supplied individually as standard, i.e. unassembled.

If required, SCHNEEBERGER can also supply rails and carriages assembled incl. accessories as complete systems. Please note the ordering instructions in chapter 2.4 if this applies.

NB

Q.v. chapter 10.1 to 10.3 for an overview of types, details of shapes, available options and accessories.

Q.v. chapter 2 for a description of the options.

If possible, standard lengths are preferred for L3 rail length.

These are calculated with the table values in chapter 10.2 using the following formula: $L3 = n \times L4 + L5 + L10 \leq L3_{max}$.

Q.v. chapter 10.1 to 10.3 for an overview of types, details of shapes, available options and accessories.

Q.v. chapter 2 for a description of the options.

For detailed information about current configuration options for the interfaces, please visit our website at www.schneeberger.com

With the MONORAIL AMSA 3L, SCHNEEBERGER provides an integrated measuring system for distance measurement for the construction of particularly long axes with specific requirements regarding the accuracy of the system. From a mechanical point of view, the AMSA 3L is based on the SCHNEEBERGER MONORAIL MR roller guide. The special design of the rail joints combined with the AMSA 3L reading head means that the joints can be traversed and any long measuring axes can be constructed. The analogue interface 1Vpp (200µm signal period) with various cable lengths is available as a control interface.

Various options regarding lubrication and sealing of the measuring carriages mean that optimal adjustments can be made to the requirements of the application. The easily exchangeable reading head is identical and replaceable for all sizes.

Features of System MONORAIL AMSA 3L

11.3 Accessories

AMSA 3L Rails accessory details

Assembly tools

The MWM3L assembly tool is intended for the phase-locked assembly of the AMSA 3L rails. It consists of a size-dependent guide carriage, two mounting housings and two reading heads for registering the phase. Furthermore, the MWM assembly tool contains the display software for calibrating measurements and the assembly and start-up instructions.

Order code: **MWM 3L xx**

xx = size, ordering example: 1 x MWM 3L 55

End pieces

The AMSA 3L concept allows the rails to be separated according to the desires of the customer for the first and last rail segments of a set of rails.

After separation, the EST 3L end pieces prevent the masking tape on the measuring element from detaching. The end pieces may be used on both sides, and are attached using a central screw in the front drill holes.

Order code: **EST 3L xx**

xx = size, ordering example: 1 x EST 3L 55

11.4 Order key

Individual guide rails and carriages are ordered in accordance with the order codes described below.

AMSA 3L carriages consist of guide carriage, casing and reading head.

All MONORAIL MR carriages can also be used with AMSA 3L rails.

Q.v. chapter 2 and chapter 3.3 for the order key for accessories.

Separate order codes are used in each case for rails, carriages and accessories. This also applies to different versions of rails and carriages.

All guide components are supplied individually as standard, i.e. unassembled.

If required, SCHNEEBERGER can also supply rails and carriages assembled incl. accessories as complete systems. Please note the ordering instructions in chapter 2.4 if this applies.

Order code for AMSA 3L Rails

	1x	AMSA 3L S	35	-N	-G1	-KC	-R11	-3000	-CN	-TR 40

NB

Q.v. chapter 11.1 to 11.3 for an overview of types, details of shapes, available options and accessories.

Q.v. chapter 2 for a description of the options.

If possible, standard lengths are preferred for L3 rail length.

These are calculated with the table values in chapter 11.2 using the following formula: $L3 = n \times L4 + L5 + L10 \leq L3_{\max}$.

Order code for AMSA 3L Carriages

	1x	AMSA 3L W	35	-B	-P1	-G1	-V3	-R2	-CN	-S12	-LN	-TSU
